

MISRA C:2012 Mock Standard

1. Scope

This mock document is a synthetic MISRA-style reference for local ingestion testing. It is intentionally simplified and should not be treated as an authoritative standard.

2. Example Rule Set

Rule 1: Avoid unreachable code paths.

Rule 2: Use explicit type conversions when narrowing values.

Rule 3: Prefer static allocation for safety-critical embedded modules.

Rule 4: Validate every external input before use.

Rule 5: Document deviations with a traceable justification.

Rule 9.1 (Required): All automatic variables shall have been assigned a value before being used to prevent uninitialized memory reads.

Rule 11.3 (Required): A cast shall not be performed between a pointer to object type and a pointer to a different object type.

3. Review Notes

The ingestion pipeline should be able to extract these sections, chunk the text, and store them in the local vector database for retrieval experiments.
